- > (1) distribution of software within UMD has the implication that the software provider has to commit to maintain and support the software. The UMD products undergo internal validation and testing for stability. So including products in UMD is a very interesting idea but imposes some requirements on the providers of the software.
- > Also, we should understand how many NGIs would be interested in installing those products, to asses the expected uptake.

It is not a problem as for QCG middleware PSNC took a full responsibility for the software support,

for instance taking into account long-term obligations in production sites.

Other MAPPER tools will be supported and maintained by the MAPPER consortium,

details have been discussing.

yes

> but probably just a subset of services used in the MAPPER pilot are declared as EGI services in GOCDB. Am I correct?

Key middleware services that were added to EGI sties, namely PL-Grid sites, are declared as EGI services in GOCDB (visible to EGI), except maybe GridFTP we used on sites which is not in GOCDB (btw. only two gridftp services are visible now in GOCDB?).

There are a few more services that are located either in the user space or can be deployed on some dedicated nodes.

> What we discussed in Lyon is the interest in having those services in GOCDB flagged with a specific service type instead of the generic "regional service" flag. To my recollection there's an open action on the MAPPER collaboration to assess how many NGIs would be interested in having QCG services flagged as production EGI services. This choice has some implications in terms of availability of the services.

As MAPPER user communities live in different countries they will contact local NGIs to progress on that... NGIs in UK, Netherlands and Germany are on the top list.

see my comments above.

>

> Accounting requires developed as far as I understood in Lyon. Correct?

Yes, we will have these features available in PL-Grid and extend them to work with EGI in the near future. Let's hope before the next big EGI meeting in March.

Thanks a lot Tiziana!

All the best,

Chris

PS. Richard, could you please add Titiana and my comments on the EMP wiki?
